- | | | |
|--------------|----------------|----------------|
| Alabama | Kansas | North Dakota |
| Alaska | Kentucky | Ohio* |
| Arizona* | Louisiana | Oklahoma |
| Colorado* | Massachusetts* | Pennsylvania* |
| Connecticut* | Michigan* | Rhode Island* |
| Arkansas | Minnesota | South Carolina |
| Delaware | Mississippi | South Dakota |
| Florida | Missouri | Tennessee |
| Georgia | Montana | Texas |
| Idaho | Nebraska | Utah |
| Illinois | Nevada | West Virginia |
| Indiana | New Mexico | Wisconsin |
| Iowa | North Carolina | Wyoming |

*Recently added

An updated list of high-risk states will be posted on coronavirus.dc.gov/phasetwo on Monday, November 1.

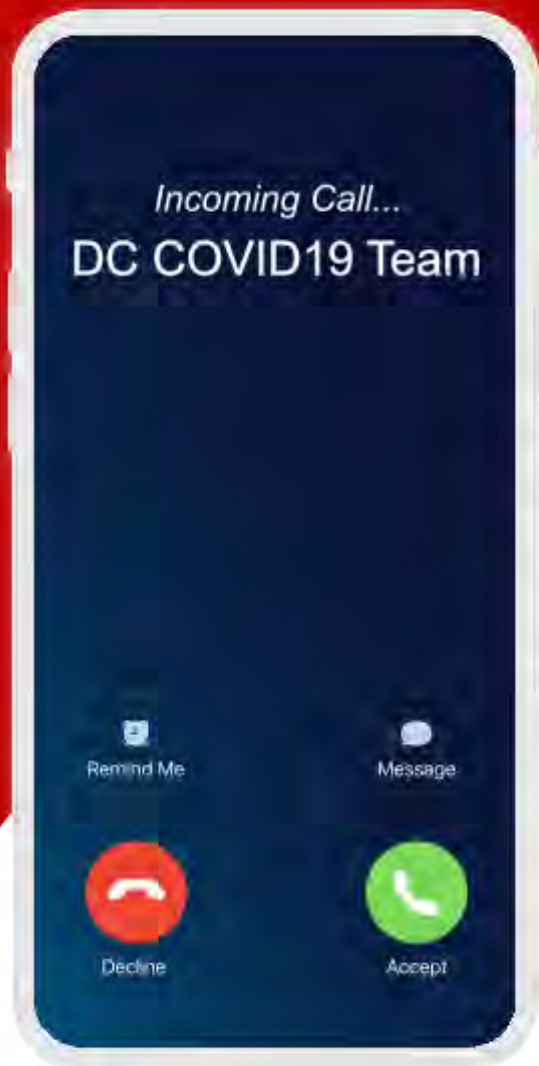

Before traveling, be mindful of the risks and requirements.

Where We Are Today

Level of Community Spread	Daily case rate	Rate of transmission	Test positivity rate	New cases from quarantined contacts
	7.9 (Oct 17) 7-day avg. per 100,000 pop.	0.85 (Oct 7) Effective reproduction number (R _t)	2.0% (Oct 15) Percent positive from RT-PCR tests	10.6% (Oct 15) 7-day average
Health System Capacity	Percent hospital utilization	Percent COVID-19 patients	Mean test turnaround time	Diagnostic tests conducted
	82.0% (Oct 17) of available beds without surge	4.1% (Oct 17) of daily hospital census, 7-day average	2.6 (Oct 17) (days) 7-day average	5,163 (Oct 15) 7-day avg. per million pop.
Public Health System Capacity	Positive cases with contact attempt	Close contacts with contact attempt		
	100% (Oct 16) 7-day avg. attempt within 1 day	97.6% (Oct 15) 7-day avg. attempt within 2 days		
Community Engagement	Positive cases interviewed	Positive cases who provide close contacts	Mean number close contacts provided	
	74.8% (Oct 15) 7-day avg. completed within 3 days	46.1% (Oct 15) 7-day avg.	1.3 (Oct 15) 7-day avg. mean per positive case	

ANSWER

THE CALL

The DC Contact Trace Force will never ask you for your:

- Help DC contain the virus
- Stay anonymous
- Protect your friends, family, coworkers, and neighbors
- Immigration status
- Social security number
- Bank account details or credit card numbers

DC COVID Alert Notice (DC CAN)

DC has a new tool to help residents know if they may **have been exposed to COVID-19**:

DC COVID Alert Notice (DC CAN)

On Tuesday, October 20, DC residents with iPhone or Android smartphones will begin receiving push notifications inviting them to **opt into exposure notifications**.

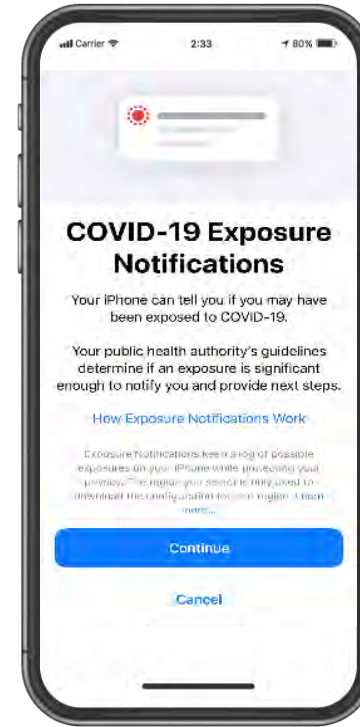

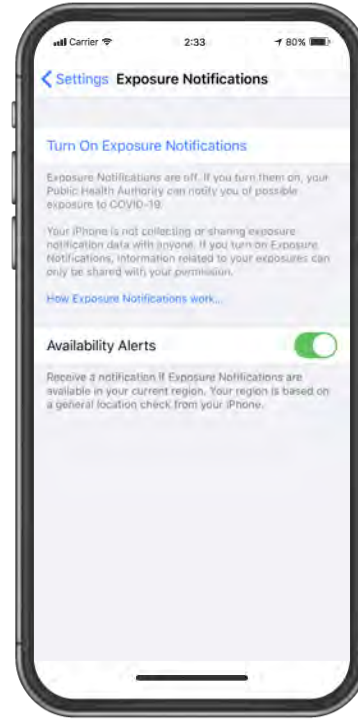

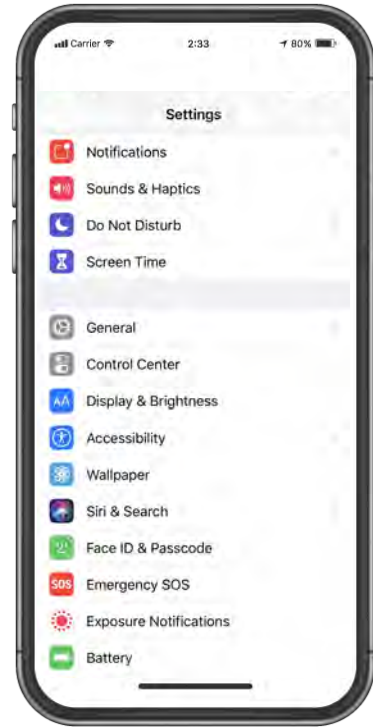

This technology was created for the sole purpose of helping to stop the spread of COVID-19. The Exposure Notifications System will be disabled once the pandemic reaches a point that no longer necessitates the use of this technology.

If you share your information, it will not be shared with any other agencies like law enforcement or immigration.

You can **choose to share** your information, and it will only be used for public health purposes. For example, you can opt to provide your phone number so that a contact tracer may follow-up.

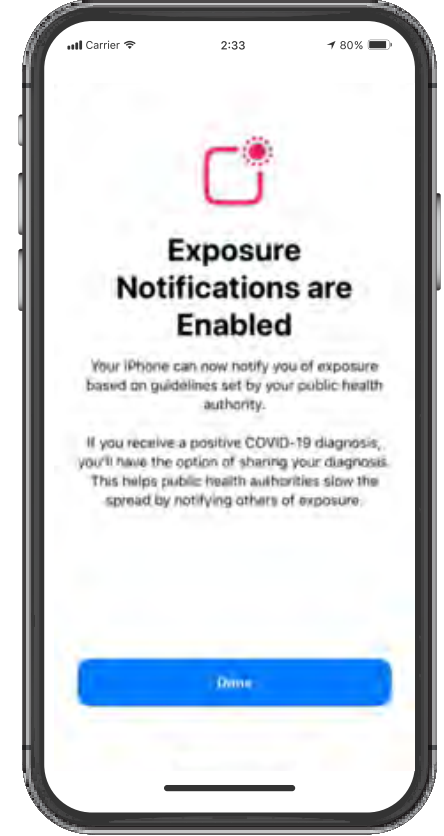

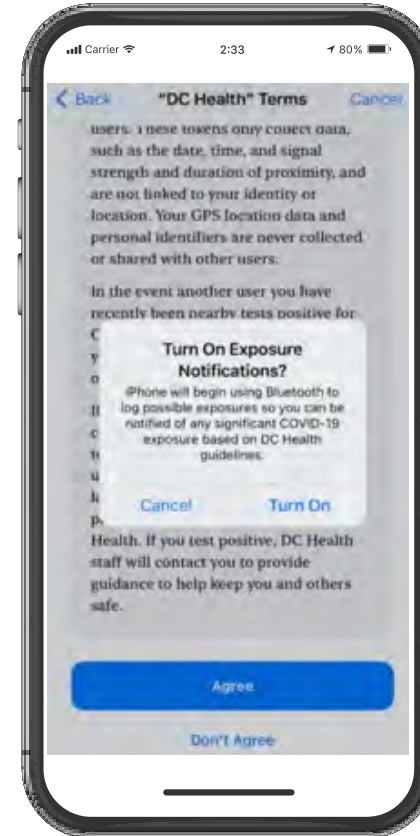

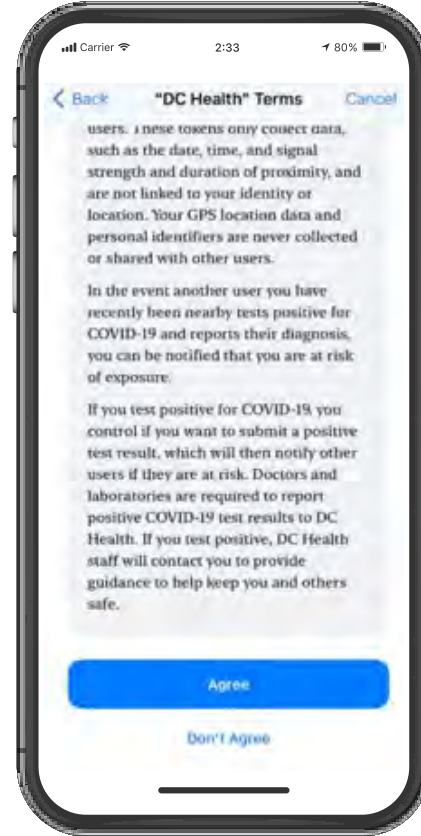

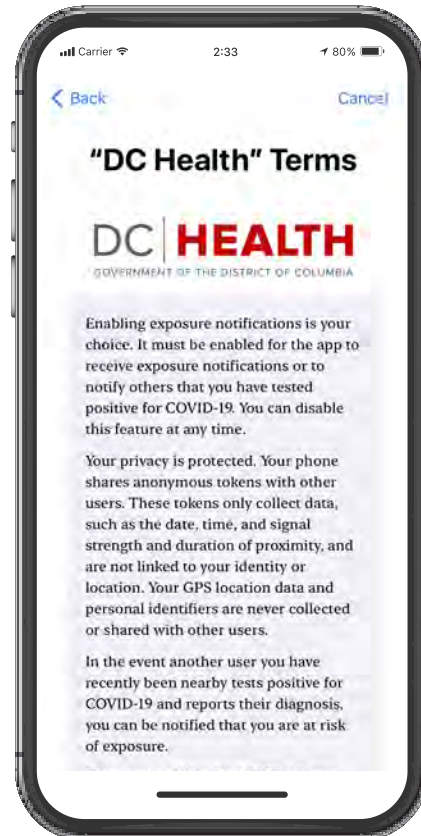

You can also **choose not to share** any personal information and still use the system privately and anonymously.

On iOS, users will be able to opt into exposure notifications through settings without having to download an app.

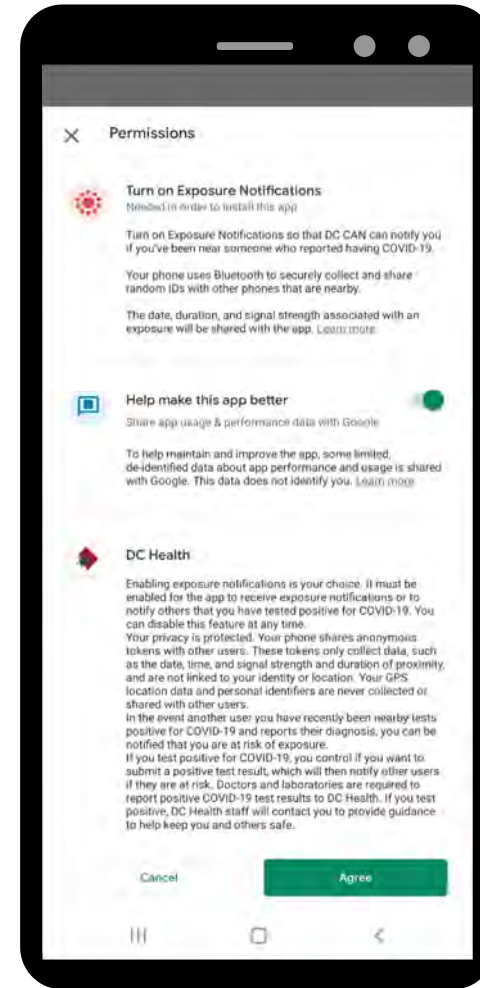

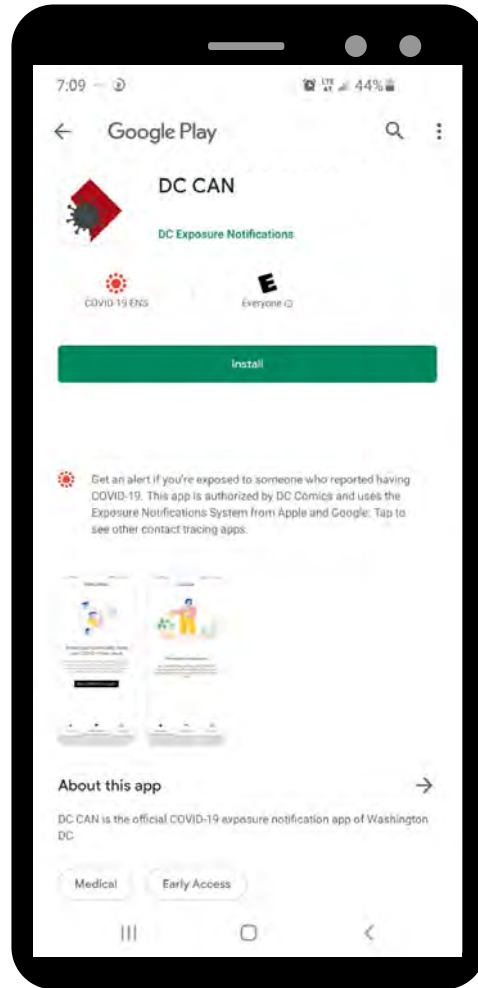

Beginning Tuesday, October 20, iPhone users will be able to turn on COVID-19 Exposure Notifications in Washington, DC.

Once you turn on the COVID-19 Exposure Notifications through your settings, you will be prompted through the onboarding process.

Android Users

On Android, users will be prompted to opt in and install the DC CAN app from the Google Play Store.

1

Once enabled, **users' devices will regularly send out a beacon via Bluetooth** that includes a privacy-preserving, random Bluetooth key. Nearby phones will be listening for these beacons as well as broadcasting their own. Each phone will store the beacons it receives securely on the device.

2

Once per day, **the Exposure Notifications System will download a list of keys belonging to people who have tested positive** for COVID-19 and reported it through the system.

3

Each device will **check the list of keys it has stored against the downloaded keys** and if there is a match, the user will be notified and advised on next steps.

Alice and Bob don't know each other, but have a lengthy conversation sitting a few feet apart.

Bob is diagnosed with COVID-19 and enters the test result in DC CAN using a code provided by the DC Contact Trace Force.

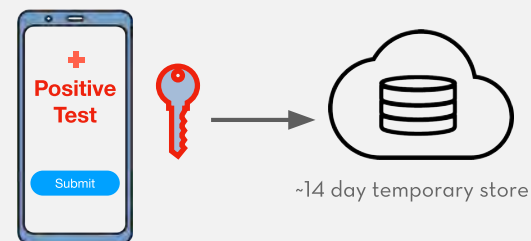

A few days later...

Their phones exchange anonymous identifier beacons (which change frequently).

With Bob's consent, his phone uploads the last 14 days of keys for his broadcast beacons to the cloud.

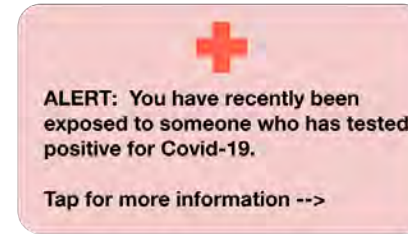

Apps can only get more information via user consent

Alice continues her day unaware she had been near a potentially contagious person.

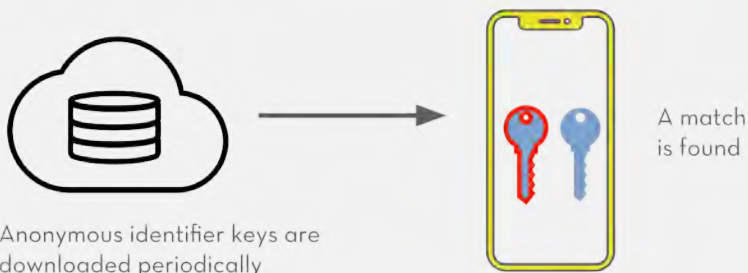

Alice sees a notification on her phone.

Sometime later...

Alice's phone periodically downloads the broadcast beacon keys of everyone who has tested positive for COVID-19 in her region. A match is found with Bob's anonymous identifier beacons.

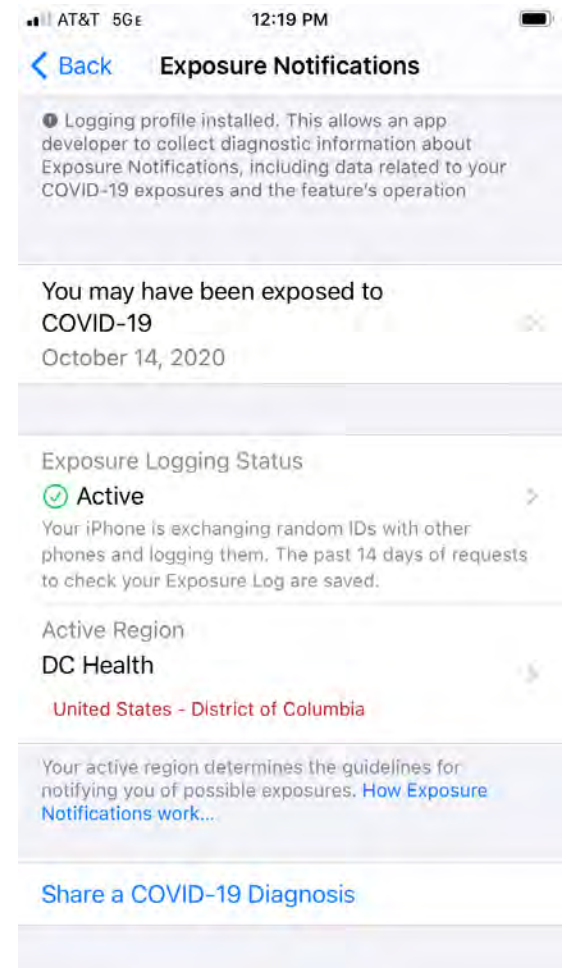

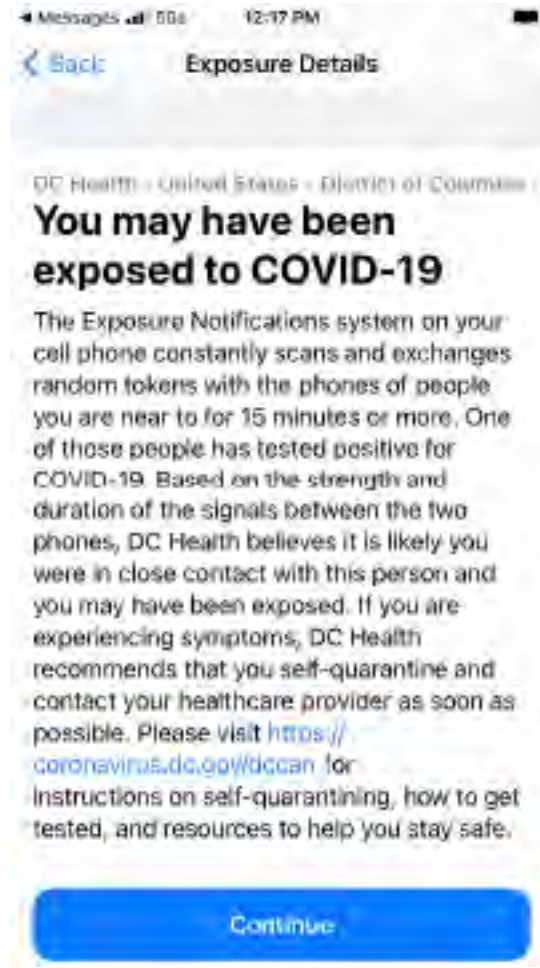

Alice's phone receives a notification with information about what to do next.

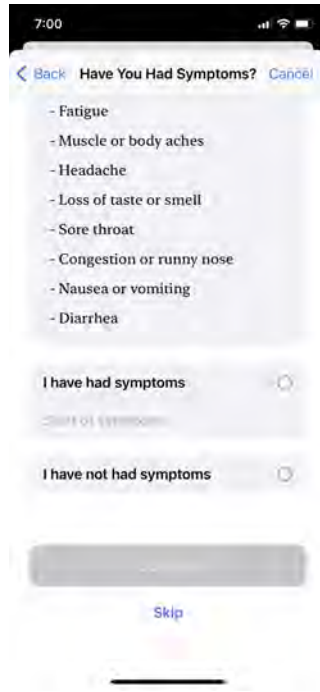

Exposure Notification

Once you have opted in and/or downloaded the app, you will get notifications to let you know if you may have been a close contact of a person diagnosed with COVID-19.

Sharing a Positive COVID-19 Diagnosis

Users will verify their diagnosis with a code provided by the DC Contact Trace Force.

DC CAN protects user privacy and data security.

The Exposure Notifications System **does not share location** data from the user's device with DC Health, Apple, or Google. In addition, persons who test positive **are not identified** by the system to other users, or to Apple or Google.

Users must explicitly choose to turn on exposure notifications and can turn it off at any time.

DC COVID ALERT NOTICE

Together, DC CAN
stop the spread.
